DATASHEET

Click Medical AED Defibrillation / CPR Poster

- Fully coloured illustrations and clear, easy to follow text
- Clear step by step instructions
- Compiled by qualified health and safety practitioners
- Encapsulated finish for superior durability
- Fully updated with the latest guidance
- Size 59 x 42cm (A2 Paper size)

AED Defibrillation & CPR

1. AED Defibrillation

The power of an AED (Automated External Defibrillator) is comparable to CPR. It significantly increases the chance of survival from a cardiac arrest.

The delivery of a controlled shock from an AED, under the instruction of voice and/or graphics, is the best chance of survival. It is more effective than rescue without CPR and defibrillation the chance of survival returns by 10% (British Heart Foundation).

All the models set by this guidance for first aid will only deliver a shock to the casualty if required. The machine is able to detect if there is a heart rhythm present and if required, a controlled electric shock will be delivered automatically to the resuscitator of the casualty.

Access the AED

Place AED that you and any bystanders can easily reach nearby look for:

- Red signs
- Symbols
- Arrows
- Handicaps

Check the casualty

Place AED that you and any bystanders can easily reach nearby look for:

- Unconscious
- No Breathing
- No Pulse

Check whether the casualty is responsive

- 1) Ask "Open your eyes if you can hear me" and call their name if you think it.
- 2) Ask if both the casualty's arms to wiggle their arms.
- 3) Check casualty's reactions.
- 4) If not responsive, shout for help and start CPR.

For an emergency casualty

Place the AED on the casualty's chest. There are no obvious contraindications. Do not place the AED on the chest if the casualty is wearing a bra, this will lift the tongue from the back of the throat.

If a metal object is attached, and you have to place the AED on the chest and ribs. This includes normal braiding.

For an emergency casualty

- 1) Ask the casualty to lie on their back.
- 2) Ask the casualty to lie on their back.
- 3) Ask the casualty to lie on their back.
- 4) Ask the casualty to lie on their back.

2. Danger

Access the AED

Place AED that you and any bystanders can easily reach nearby look for:

- Red signs
- Symbols
- Arrows
- Handicaps

Check the casualty
